Portfolio available at vlook.pro/en/projects

Services Scope

I design and implement comprehensive solutions in Oracle ERP (Fusion) and Oracle BI (OTBI, BI Publisher), focusing on financial process automation, data quality, and operational security. I deliver end-to-end projects – from requirements analysis through configuration to reporting and post-implementation support. My solutions support the daily operations of both operational and decision-making teams.

Technical Skills

- Oracle Fusion ERP: configuration, parameterization, integrations, system issue diagnostics and resolution
- Oracle BI: OTBI (analysis creation), BI Publisher (data models, XLS/RTF templates – excluding layout editor)
- SQL (Oracle): queries, error analysis, ad hoc data extraction
- Excel: Power Query, VBA, process automation
- Power BI: basic DAX, data warehouse integration, report building
- End-to-end process design, data quality assurance

Soft Skills

- Cross-departmental communication
- Conducting technical and user training
- Independence: planning, implementation, testing, maintenance
- Creativity: designing non-standard solutions, implementing innovations
- English: technical documentation, basic project communication

Education & Development

Accounting Technician – Public Post-Secondary School of Modern Technologies, Łódź (2013–2015)

Self-directed learning and professional development in Oracle, SQL, BI, and VBA on real production systems. Hands-on project experience without developer support, focused on operational needs.

Professional Summary

For the past 4 years, I've been building Oracle Fusion and Oracle BI environments by designing tools tailored to real business needs. I work independently but remain in constant communication with users and process owners. I create intuitive, efficient solutions that meet process requirements and ensure data security. My core focus is improving reporting and reducing operational risk through automation.

Professional Experience

05.2018 – Present

Business Support Solution

ERP/BI System Architect | Stream Lead – Accounts Receivable

- Oracle Fusion ERP implementation (Accounts Receivable): needs analysis, configuration, testing, optimization, post-go-live support
- Design of data models, reports, and analyses in Oracle BI (OTBI, BI Publisher), tailored to organizational specifics
- Automation of recurring reports and processes using Excel and VBA
- Technical consulting and feasibility analysis of proposed improvements
- Process documentation and training material standardization for Oracle Fusion (AR) users
- Onboarding and mentoring for new team members

Selected Projects

- Profit and Loss Statement (BI Publisher)

Custom-built data model and report aligned with the group's financial structure

Scope: data model creation, report logic, testing, publication

- Rebilling Report (BI Publisher)

Integrated report combining data from Accounts Receivable, Accounts Payable, and General Ledger

Scope: data model development, testing, production environment integration

- Invoice Preparation System with Data Validation (Excel + VBA)

Tool integrating operational, sales, and finance data

Scope: automation, validation, control logic, user training

- Automated PDF Invoice Sending (Excel + VBA / BI Publisher)

Two implementation variants: Excel-based and directly via Oracle Fusion

Scope: sending logic, deployment, user documentation

Business Value of Selected Projects

- Invoice cycle time reduced from 3 days to 1 day (–66%)
- Manual data processing reduced by 60–90%
- Accounting analysis time shortened from hours to minutes
- Operational input error rate reduced by 30–50%
- 100% audit compliance (OTBI reports)
- Automations accessible to end users – no IT support required
